Demand MRP

1. Demand MRP (Demand Generation)

Explanation: The Demand MRP process begins with the creation of a *Sales Order* to trigger production requirements within the system. A Sales Order (Order #82770) was generated for the customer "ADDISON". The order specifies the requirement for the item **PART-NIZ-001** (Barang Jadi Nizam) with a quantity of 50 EA. The *Need By Date* was set to February 25, 2026, which serves as the primary timeline for the MRP engine to backward schedule the necessary production activities.

Supporting Evidence:

- **Screenshot**

File:

The screenshot displays the SAP Sales Order #82770 - Line 1 details. The interface includes a top navigation bar with the URL 'https://103.118.82.98/kinetic' and user information. The main header shows 'Order 82770 - Line 1' with an 'Open' status and 'Order Total \$ 0.00'. The 'Details' tab is active, showing the 'Line Detail' section. The 'Part' section includes 'Line Number * 1', 'Part * PART-NIZ-001', and 'Description * Barang Jadi Nizam'. The 'Quantity / Price' section shows 'Order Qty 50', 'EA' unit, 'Price Per /1', and 'Unit Price \$ 0.00'. The 'Dates' section shows 'Need By 2/25/2026' and 'Ship By 2/25/2026'. The 'Status' section shows 'Open Line'. The 'Quantities' section shows 'On Hand 0', 'Available 0', 'This Line 50', and 'Shipped 0'. The 'Totals' section shows 'Ext Price \$ 0.00', 'Less Discount \$ 0.00', and 'Misc \$ 0.00'. The 'Cross Reference' section shows 'Customer Part...', 'Revision', and 'Pricing Quantity 0'. The 'Categories' section shows 'Sales Category'.

- (Description: This screenshot displays the finalized Sales Order #82770 with the status "Open," confirming the demand for 50 units of PART-NIZ-001.)

2. Process MRP (Material Requirements Planning)

Explanation: Following the demand generation, the *Material Requirements Planning* (MRP) process was executed to calculate net requirements. The process was configured for the "Chicago" Site, with a *Cut Off Date* set to March 30, 2026, to ensure the planning horizon covers the delivery date. A specific filter was applied for **PART-NIZ-001** to isolate calculations for this item. The system processed the demand from the Sales Order against the current inventory levels to generate actionable *Job Suggestions*.

The screenshot shows the 'Process MRP' interface. At the top, there's a header with a home icon, a grid icon, and a URL bar showing 'https://103.118.82.98/kinetic MANAGER English/United States Work Station 100 - Master Epicor USA Chicago'. Below the header, there's a section with two input fields: 'Number of MRP Processes' set to 1 and 'Number of Schedulers' set to 1. To the right of these fields is a checkbox labeled 'Include only Parts with activity or min/safety'. Below this is a 'Filter' section with four input fields: '1 Site', '1 Part', 'All Part Classes', and 'All Product Groups'. To the right of these fields are two tags: 'MfgSys' and 'PART-NIZ-001'. Below the filter section is an 'Advanced' section with a 'Schedule' dropdown set to 'Now' and a 'Recurring' checkbox.

The screenshot shows the 'Process MRP' interface with the 'Options' tab selected. At the top, there's a header with a home icon, a grid icon, and a URL bar showing 'https://103.118.82.98/kinetic MANAGER English/United States Work Station 100 - Master Epicor USA Chicago'. Below the header, there's a 'Last Run' section with three input fields: 'Date' set to 6/30/2025, 'Time' set to 07:50 PM, and 'User ID' set to MANAGER. Below this is a 'Processing Options' section with two radio buttons: 'Net Change' (selected) and 'Regenerative'. Below these are two input fields: 'Cut Off Date' set to 3/30/2026 and 'Schedule Start Date' set to 2/10/2026, each with a 'Dynamic' checkbox. Below these are three input fields: 'Log', 'Logging Level' set to Basic, and 'Logging Type' set to Overwrite. At the bottom, there are two columns of checkboxes. The left column has: 'Run Finite Scheduling during MRP Calculation' (checked), 'Ignore Constrained Materials' (unchecked), 'Allow Historical Dates' (unchecked), 'Use Production Preparation Buffer' (checked), and 'Sort Level 0 MRP Jobs by Date' (unchecked). The right column has: 'Recycle MRP Jobs' (unchecked), 'Get Details from Quote' (unchecked), 'Run the Multi Level Pegging Process' (unchecked), 'Include Contract PO Parts' (unchecked), and 'Run Generate Purchase Schedules' (unchecked). A 'Process Submitted' notification box is visible in the top right corner.

- (Description: This screenshot shows the Process MRP interface with the correct site and date parameters, along with the "Process Submitted" notification indicating successful execution.)

3. Job Creation (Production Job Firming)

Explanation: Based on the MRP calculations, a *Job Order* was created to fulfill the demand for 50 units. The Job, identified as **JOB-NIZ-01**, has been fully configured and processed. The status of the job has been updated to *Firm* (confirmed), *Engineered* (technically verified),

and *Released* (issued to the production floor). Furthermore, the job structure successfully includes the required *Bill of Materials* (Material 01) and *Bill of Operations* (Operation 10), ensuring all resources are ready for manufacturing.
