

CASE & RULES (READ!)

C. SERVICE – PT Konsultan Cerdas

Master Data:

- Services:
 - IT Consulting (IDR 15,000,000)
 - IT Audit (IDR 30,000,000)
 - Training (IDR 10,000,000)

Transactions:

1. Service sales (AR)
 - 3 clients (credit)
2. Operating expense (AP)
 - Office rent IDR 3,000,000
3. Payroll:
 - 3 employees @ IDR 5,000,000

3. STUDENT TASKS

A. SYSTEM SIMULATION

Students must:

- Input master data
- Input transactions:
 - *Sales → AR*
 - *Purchase → AP*
 - Payroll

B. REQUIRED OUTPUT

Students must generate:

- Invoice (AR)
- Bill (AP)
- Reports:
 - AR Aging
 - AP Report
 - Profit & Loss

C. ANALYSIS

Students must explain:

1. AIS Process Flow

- *From input → output*

2. Differences Between Company Types

3. PAPER FORMAT

Structure:

1. Introduction
2. Overview of Accurate Online
3. Process Simulation
4. Output Analysis
5. Comparison Insight
6. Conclusion

4. PRESENTATION FORMAT (20 MINUTES)

Slide Structure:

1. Company Overview
2. System Overview
3. Process Flow
4. Demo Screenshot
5. Output Report
6. Comparison Insight
7. Conclusion

5. ANTI COPY-PASTE AI

A. Real Evidence (Mandatory)

Students must include:

- System screenshots
- Unique transaction numbers
- Group company name

B. Personal Reflection (Mandatory)

Students must answer:

What was your biggest difficulty when using the system, and how did you solve it?

C. Data Variation

Each group must have:

- Different company name
- Slightly different numbers

D. No Generic Answers

Rule:

Generic answers without implementation evidence will receive significant penalties.

ABSTRACT

This paper discusses the implementation of an Accounting Information System (AIS) using Accurate Online in a service company named PT Konsultan Cerdas. The purpose of this simulation is to understand how accounting transactions are processed digitally, starting from data input until financial reports are generated automatically by the system. In modern business operations, accounting software is important because it helps companies improve efficiency, reduce errors, and organize financial data more effectively.

PT Konsultan Cerdas is a service company that provides IT Consulting, IT Audit, and Training services. In this simulation, students input master data including company information and service data, followed by transaction data such as service sales on credit (Accounts Receivable), operating expenses (Accounts Payable), and payroll transactions. These activities represent the common accounting processes in a service company.

Using Accurate Online, the system can automatically generate accounting documents and reports such as invoices, bills, AR Aging Reports, AP Reports, and Profit & Loss Reports. This automation helps users save time and minimize manual calculation errors.

Through this project, students are able to understand the flow of an Accounting Information System from input, processing, to output. Students also gain practical experience in using accounting software and learn the differences between service companies and other company types. Overall, the implementation of Accurate Online demonstrates how digital accounting systems can support business efficiency and accurate financial reporting.

CHAPTER I

INTRODUCTION

Now in the business world, technology has become a key ingredient in enabling businesses to run their operations and businesses more efficiently and accurately. Digital systems are now employed by many companies to facilitate their routine business activities, particularly in accounting and financial management. An Accounting Information System (AIS) is one of the technologies that is commonly used. An AIS can be defined as a system that collects, processes, records, stores, and produces financial information that can assist management in making better business decisions. An AIS can eliminate errors, save time, enhance data organization and boost productivity in the workplace when compared to manual accounting practices.

Accurate Online is one of the many popular accounting software programs that are used by businesses. Accurate Online is an online accounting system that automates and streamlines the process of booking transactions for companies. Some of the features of the system include sales recording, purchase transactions, payroll, invoice generation and financial reports. The cloud-based solution allows users to access company data anywhere, anytime with an internet connection, providing flexibility and usability in business operations.

The research in this project is targeted at the implementation of the Accurate Online in a service company called PT Konsultan Cerdas. A service company is a business that generates income through the provision of services or professional knowledge to clients rather than by the sale of any tangible item. The services provided by PT Konsultan Cerdas are IT Consulting, IT Audit and Training services. Service companies differ from manufacturing companies which make products or trading companies which sell products, as they primarily provide customers with an intangible product. The accounting functions for these service companies tend to be more associated with the services they sell, their operating costs and employee salaries.

The overall goal of this simulation is to gain insight into the workflow of accounting activities in a digital environment with Accurate Online. In this project, students will create company master data, enter the services and carry out a number of accounting transactions. The transactions are on credit sale, operating expenses transactions, and payroll transactions for employees. The transactions will be entered, after which the system will automatically process the data and create accounting outputs like Invoices, Bills, AR Aging Reports, AP Reports, and Profit & Loss Reports.

CHAPTER II

OVERVIEW OF ACCURATE ONLINE

2.1 Definition of Accurate Online

Accurate Online is a cloud based accounting software designed to help companies manage financial transactions efficiently and automatically. The system provides integrated features such as sales management, accounts payable, payroll, and financial reporting that can be accessed in real time through a web browser.

2.2 The Use of Accurate Online in Service Companies

In this simulation, PT The Things Consultant Group 3 used Accurate Online to manage sales transactions, operational expenses, payroll activities, and financial reporting processes. The system helps the company perform accounting activities more efficiently through automated and integrated features.

2.3 Features Used in Accurate Online

2.3.1 Accounts Receivable (AR)
